

New Product Press Release

Teresonic™ Announces Jazz Legends, a Limited Edition Loudspeakers, with Original Artwork and Ultra High Performance of the Integrity design

Ultra-high 101dB sensitivity with Lowther drivers and unique design for true Jazz lovers

San Jose, June 5, 2006 — Today Teresonic LLC announced new Integrum© Jazz Legends, a limited edition of loudspeakers capable of producing remarkable levels of the highest quality sound with only a few Watts per channel. This edition is limited to only ten (10) pairs. Each pair is dedicated to one of the jazz legends and is absolutely unique. Each pair is carefully handcrafted with an original artwork – representing the ten greatest jazz musicians from Louis Armstrong to Dizzy Gillespie, Ray Charles, Benny Goodman, Miles Davis, Billie Holiday, Duke Ellington, Charlie Parker, Ella Fitzgerald, and Sarah Vaughan.

“Our customers tell us that listening to Teresonic speakers is truly a sublime experience. The ability to speak across the full frequency spectrum with one voice, and with such speed and lack of coloration reproduces the sound with startling realism, imbuing the music with life and energy,” said Mike Zivkovic,

President of Teresonic. “The Jazz Legends edition is pushing the sonic qualities even further, and adding a stunning artwork representing some of the greatest jazz musicians of all times. This combination of unique sound quality and design will win admiring glances in any setting.”

Integrum Jazz Legends speakers are designed for highest sonic performance with vacuum tube amplifiers and other high-fidelity applications. The unique musical instrument-like acoustic design of Teresonic speakers establishes a new standard for natural, exceptionally detailed sound, and stereo imaging that was not previously available in this price range.

It is all about what makes music, *music*

What makes Teresonic speakers unique are their architecture and geometry, the result of many years of research and countless experiments aiming to produce the most *natural* sound possible. Every sound source in nature is radiating sound waves from a single “point” – whether it’s a violin, a trumpet, or a human voice.

Teresonic speakers follow this design rule of Nature with one-way design, using full range high-efficiency Lowther drivers. There are no crossovers of any kind, resulting in natural sound with a wealth of detail, exceptional dynamic range and a sense of musical “aliveness” that you won’t often hear elsewhere. Crossovers, unavoidable in multi-driver designs introduce phase and balance problems that cause deterioration in detail, transparency and imaging. Therefore Teresonic speakers don’t use them at all. No electronic components stand between your sweet sounding tubes and the top quality, full range driver.

“Teresonic sound is amazingly natural... organic, not the faintest hint of coloration. They are downright addictive... You can listen to them day in and day out,” said Neb Maricic, baritone, one of the greatest Mozart Figaro’s who performed in Scala, Opéra National de Paris, Bolshoi Theater...

Designed and handcrafted to endure the test of time

Form follows function and Teresonic enclosures are sculptured like the finest musical instruments. The front face is magnificent rosewood, while the sides are black with beautiful artwork representing jazz musicians. Every speaker is individually handcrafted by our master cabinet maker including a long and careful process of polishing and seven layers of varnish using the finest materials such as Italian finishes and premium German and British components. Many high-end speakers on the market will use standard wiring inside the box. Teresonic speakers are equipped with high-end Teresonic Clarison© cables inside the enclosure, shielded to provide triple signal protection against electromagnetic and acoustic fields (aka “acoustic horn”) that can be exceptionally strong inside speaker enclosures.

“Have you ever wondered why there are no square violins, trumpets, or acoustic guitars... so, why do they make square speakers? Because it’s very hard to make them like we do,” said Mike Zivkovic, President of Teresonic. “Teresonic speakers are designed following centuries old, proven techniques used in making fine musical instruments, but combined with latest science, materials and technology.”

Availability of Teresonic Integrum Jazz Legends loudspeakers

Integrum Jazz Legends speakers are available now in a limited quantity – total of ten (10) pairs is produced in this limited edition series. The Integrum Jazz Legends retails for US\$10,950. They come with a 30-day Total Satisfaction Guarantee and full three year warranty.

Specifications include sensitivity of 101.5dB (1W/1kHz/1m), bandwidth of 30Hz-22kHz \pm 3dB, and power handling of 4 - 100 Watts into 8 Ohms nominal impedance. Complete specifications are available at www.teresonic.com.

Founded in 2005, Teresonic LLC is privately held company based in San Jose, in the heart of California’s Silicon Valley. Teresonic is dedicated to research, design and manufacturing of high-end audio products providing the most natural sound. Our mission is to bring the musical reality of a concert hall or jazz club to your listening room.
