

Extreme Performance. Organic Sound. Sculptured like fine music instruments. Superbly handcrafted.

More pure sound per Watt

Tube lovers prepare to be amazed! Teresonic™ speakers will produce big, dynamic sonic performance even with your low power tubes. Ultra high performance Teresonic speakers produce over 100dB of pure, natural sound – 10 times more pure sound per Watt than any comparable speakers, and levels of detail, neutrality and stereo imaging, are beyond anything else.

Compare leading performance and price of Teresonic speakers to any comparable high-end products from Legacy Audio, Dali, Sonus Faber, Westlake, Wilson Audio, Triangle...

Pure, Natural Sound

Nothing stands between the sweet sound of your tube amplifier and the legendary Lowther full range speaker drivers, regarded as the world's best.

Unique design with no active or passive crossovers to introduce sound coloration or signal losses unavoidable in multi-way designs. The result is natural sound that you will never get tired of – day in and day out, like no other speakers regardless of price.

Superbly Handcrafted

Every speaker is superbly handcrafted by our master cabinet maker from the finest materials and components such as WBT connectors.

Many high-end speakers will use standard wiring inside the box. Teresonic speakers use the same \$1,000 high-end Clarison© cables inside the box that are offered to connect to your amplifier. Triple protection from electric fields and magnetic fields and acoustic fields (aka “acoustic horn”) makes Clarison zero-interference© audio cables unique in the industry.

Ingenium© and Integrum© models

Ingenium is the reference loudspeaker for vacuum tube amplifiers and other high-end, low-power applications. Integrum creates a new standard for price/performance in high-end loudspeakers for high-sensitivity applications offering compact design with sound qualities of speakers costing over \$20,000. Both models offer:

Feature	Benefit
101.5dB sensitivity	Low power tubes will sound big
30Hz-22kHz range	Full range in one-way design
No crossovers/filters	Pure, uncolored, natural sound
4 - 100 Watts, 8 Ohm	Low power and high power amps
Handcrafted	Superb quality, unique design

“Teresonic sound is amazingly natural... organic, not the faintest hint of coloration. They are downright addictive...far and away the most fascinating and formidable speakers I've yet encountered. You can listen to them day in and day out– it's nearly hypnotic. Their ability to play loudly with only a few watts made my low power 2A3 SET produce incredibly big, dynamic sound I had never dreamed of.”

Neb Maricic
Bariton
One of the greatest Figaro's

Sculptured like fine music instruments

Wonder why there are no square shaped violins, trumpets, or acoustic guitars... so, why do they make square shaped speakers? Because it's very hard to make them like we do – individually handcrafted, covered in the finest veneer with hand rubbed oil finishes, and several layers of high gloss varnish giving you a product you can enjoy for a lifetime..

Hear your tube's sweet sound like never before

The delicate sound of a violin. The all-encompassing power of a symphony. The alluring intimacy of Sara K closely recorded voice. The magnificence of an orchestral rendering of Also Sprach Zarathustra. The special feeling of your favorite music. Your emotions will elevate to new heights while listening to your new Teresonic full-range speakers. "You won't find other speakers that came even close to Teresonic accuracy and tonal neutrality..." D. D, Opera singer

Special Limited Time Offer

Order any Ingenium© or Integrum speaker by November, 2005 and we will include one set of 10ft Clarison© speaker cables and free shipping in continental USA – over US\$1,000 value!

All our products carry a full 30-day Total Satisfaction Guarantee.
